

ELECTION PLATFORM

FOR SUSTAINABILITY

Socialdemokraterna

WE WILL GROW SUSTAINABLY

The last couple of years it seems as though a construction crane has been around every corner. We are in the middle of a journey towards a new municipality. Politically we want to make sure that journey is made sustainably.

A socially sustainable municipality

Our municipality should be socially sustainable, focusing on equality and a good life for all. For us to be able to welcome more citizens to Skellefteå we need housing and that is why we have created a comprehensive housing plan. Beyond that we will keep providing time, resources and focus on housing. In the city centre as well as in other parts of the municipality we need more housing. And with construction companies lining up to start building, plans and permits must be available for both houses and apartment buildings. A mix of different types of housing in the same residential area prevents segregation and makes for good neighbourhoods.

Sustainability and the climate challenge

We are facing an enormous challenge! We will grow and evolve but at the same time we have to do it sustainably. Skellefteå Kraft has in municipal hands been able to focus on the production of renewable energy, focusing on sustainability. That awareness and determination will be a guiding light for our municipality. Climate change will be taken into account regarding everything from procurement to transportation and development. Sustainability will always be at the forefront. The environmental issue is a question of fate for our generation and we will do our part.

New infrastructure

Norrbotniabanan is becoming a reality. The benefits are multiple; for the climate and business but also the growing job market. A working infrastructure, both physical and digital is important for a municipality such as Skellefteå. Karlgårdsbron together with a new route for the E4 will make sure that traffic is working within and around Skellefteå. With good local traffic and smart solutions for commuting we will create the possibility to change your means of transportation seamlessly on your way to work, school or whatever activity you are travelling to. We will make sure there are climate-smart options available. Making the right choices should be easy!

CAMPAIGN PROMISES

During this term of office
we will strive for:

Principal promise: Making the right choices should be easy.

- Improved maintenance of roads, focusing on rural areas.
- Improvement on the current situation with municipal staff parking.
- Safe open public spaces; We will illuminate Skellefteå; replacing 12000 lighting points.
- A continued and comprehensive program of residential construction. Focus on rental apartments but also other types of housing and green areas.
- A budget for carbon dioxide aimed at reducing our municipality's carbon emissions.

SKELLEFTEÅ

one giant leap

“Sustainability is an important and obvious part of the growth and development we can see in Skellefteå kommun! New green jobs are being created all the time and new people are moving in.

I like our message that making the right choices should be easy. Sustainable options have to be available. And sustainable choices possible.
So that we all can do our part!”

Magnus Nyström – Lövångers S-förening
